ABOUT ME

- I am a software developer based in Western Australia. Experienced in a variety of programming languages and frameworks. I have several years experience developing software in small to medium agile development teams focused on delivering quality applications to my clients.

PROFESSIONAL EXPERIENCE

CODERS FOR CAUSES   **Perth, WA**

Volunteer, Full Stack Developer   **2021-2021**

- Coders for causes is a university club at the University of Western Australia that develops technical solutions for charities and non-profit organizations.
- Worked with the Western Australia Institute of Sport to develop a data management and analysis tool.
- Utilized Python Django REST framework to build API endpoints to serve data to a VueJS frontend application.
- Worked with a development team of 8+ members utilizing fundamental agile development practices.

INTERNATIONAL BUSINESS MACHINES (IBM)   **Perth, WA**

Application Developer   **2021-Present**

- Shadowed senior team members to take on board as much knowledge and feedback as possible during my intern period alongside my university studies.
  - o Worked with a small client facing agile team to deliver internal web based tooling using Angular
  - o Frequently participated in discussions with both the development team and client to identify and resolve technical requirements, issues and limitations.
  - o I quickly adapted to using Angular coming from the majority of my previous experience being limited to VueJS
  - o Satisfied client requirements whilst implementing various features and bug fixes.
- Continued working with IBM in their graduate program, maintaining my position at my original client.
  - o Transitioned to a smaller project team working on the optimisation and refactoring of older client systems.
  - o Utilized Python in Azure Databricks leveraging pandas, numpy and networkx to process large volumes of data.
  - o Able to meet the clients requirements despite a restrictive timeline and unfamiliar technologies.
- Took part in organizing and running several intern onboarding sessions.
  - o Presented content to the intern cohort to introduce them to IBMs training platform.
  - o Shared personal experience as an intern with the new cohort to help them form realistic expectations for the program.
- Supported client partners for a brief time working on an RFQ (Request For Quote) project
  - o Despite being outside of my usual developer role I volunteered myself to support a senior team working on an RFQ project.
  - o Challenging to take on work outside of my comfort zone. But the projects provided an interesting learning experience and good insight into parts of the business I would not normally interact with.

EDUCATION

EDITH COWAN UNIVERSITY   **Perth, WA**

Bachelor of Computer Science, Major in Software Engineering   **2019-2021**

ADDITIONAL INFORMATION

- Experienced in frontend application frameworks including VueJS and Angular.
- Experienced in backend development using Python and Django REST framework.
- Ability to be flexible and adaptive in new and unfamiliar work environments.
- Desire to continuously learn and develop my skill set.
- Certifications: Azure Fundamentals AZ-900 (2022)
